PROFESSIONAL SUMMARY

A final-year B.Tech Artificial Intelligence and Data Science student (CGPA: 7.8 up to 6th semester) with a strong foundation in Python, Machine Learning, Deep Learning, and Computer Vision. Interested in working on AI-driven systems and practical technology solutions. Experienced in developing real-time computer vision applications, GenAI-based tools, and AI-integrated applications through academic projects, internships, and research. Currently exploring AI-based defect detection in additive manufacturing and eager to contribute to research and apply intelligent technologies to solve real-world problems.

TECHNICAL SKILLS

Languages: Python, Java

AI & ML: Machine Learning, Deep Learning, Computer Vision

Frameworks & Libraries: Flask, Streamlit, YOLOv8, OpenCV, MediaPipe, Pandas, NumPy, TensorFlow, Keras

Web Technologies: React, HTML, CSS, JavaScript, REST APIs

Databases & Tools: MySQL, MongoDB, Firebase, Git, Postman

Automation & Integration: n8n, Workflow Automation, API Integration

PROFESSIONAL EXPERIENCE

Research Intern – IIT Jammu (1 Month)

Conducting research on in-situ defect detection in continuous carbon fiber reinforced 3D printing using advanced AI/ML/DL techniques. Developing computer vision algorithms for real-time quality assurance and defect identification in additive manufacturing processes. Implementing deep learning models for automated inspection and analysis of 3D printed composite structures.

GenAI Developer Intern – Dotcom Infoway (1 Month)

Developed responsive chatbots using GenAI, creating custom models and building autonomous agents and MCPs using Python. Implemented real-time conversational AI solutions for improved user engagement.

Student Innovator – Innovation Research Park (IRP), KLNCE (1 Year)

Developed Borrow Booksy, a book rental system for closed-gate communities using Flutter frontend enhanced with GenAI capabilities. Implemented intelligent recommendation features and community-based resource management.

KEY PROJECTS

In-Situ Defect Detection in Continuous Carbon Fiber 3D Printing (IIT Jammu Intern)

Developing AI/ML/DL models for real-time defect detection in continuous carbon fiber reinforced 3D printing. Implementing computer vision algorithms with deep learning for automated quality assurance and defect classification in additive manufacturing. Conducting research on model optimization for edge-device deployment in industrial 3D printing environments.

Research Paper Generator (Own Project)

Developed a AI tool that used to at used to generate research papers in all kind of layouts,journals and conferences and it has paper plagrism checker and humanizer to generate research papers efficiently

Borrow Booksy – Community Book Rental System (Innovation Research Park Project)

Developed a mobile-first book rental platform for closed-gate communities using Flutter. Integrated GenAI for intelligent book recommendations and automated resource distribution. Implemented user authentication, inventory management, and rental analytics.

EDUCATION

B.Tech – Artificial Intelligence and Data Science (Honors) 2023-2027

K.L.N. College of Engineering, Sivagangai | CGPA: 8.0 (up to 6th Semester)

ACHIEVEMENTS & LEADERSHIP

Selected for IPC Project: Developed real-time ML surveillance system using YOLOv8 and OpenCV for person detection in crowded environments, demonstrating advanced computer vision applications.

Research Paper Published: Published research on Borrow Booksy – AI-Enhanced Community Book Rental System in IJCOT (International Journal of Computer Science and Technology), demonstrating expertise in AI integration with real-world applications.

Student Coordinator – AISTHETICA Symposium 2k26: Led the flagship AI & Data Science event with 5 engaging activities, managed cross-functional teams, and coordinated logistics for a successful departmental event.
